# GlugoMate

*Opiskelijat: Markku Putaala, Yvonne Frankort, Arttu-Pekka Konttila, Petteri Pätsi ja Pilar Murcia Pozuelo*
*Tieto- ja viestintätekniikan tutkinto*
*Ohjelmistokehityksen suuntautuminen*
*Ohjelmistokehityksen matematiikka 3 op*

OAMK OULU UNIVERSITY OF APPLIED SCIENCES

*Our app* **GlugoMate** *is a utility application for diabetics and healthcare professionals for monitoring carbohydrate intake.*

*On* **Home Screen** *we dispaly the dailay carb intake per day, organized by meals in a pie chart.*

*We used react native chart kit for the pie chart. For better clarification we used different colors for each meal.*

*Beneath the chart we added a summary of the consumed, targeted and reamining carbs of the day.*

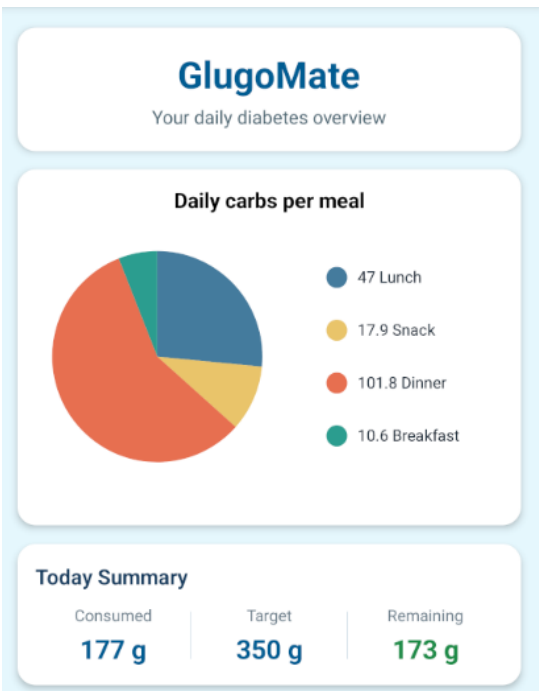

*FIGURE 1. Home Screen - Pie chart and Today's summary*

**Food Diary** *presents a varity of different charts.*

*In this section we have a horizontal progress bar, Daily Carb Target, to show the daily carbs intake compared to the actual daily carb intake recommendation in color (green, yellow, red).*

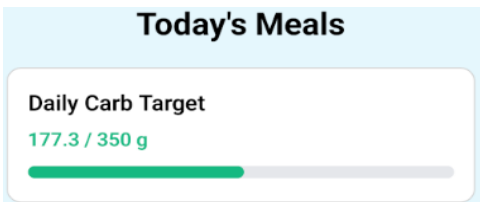

*Figure 2: Food Diary - Daily Carb Target*

*Additionally we have a line chart with a trendline to ilustrate the daily carb intake (green line) and weekly trend (orange line).*

*The 'Carbs per Meal' chart shows the summary of carbs per meal type in a bar chart. Molemmat chart types were done using react native chart kit.*

*In* **Food Search** *we have a pie chart summarizing a products nutrition information (carbs, protein, fat).*

*This chart was done using React Native Scalable Vector Graphics library.*
